

StarFax™ Digital

Send And Receive Faxes Electronically Without
The Need For Expensive Equipment

A Better Way To Fax

StarFax™ Digital adds cloud-based desktop faxing to your communications system. StarFax™ Digital users can send and receive high-quality faxes to and from their desktop or laptop computers without the need to make a printed copy or use a physical fax machine. StarFax™ Digital is the modern, environmentally friendly way to incorporate fax into your business workflow without paper, ink, or power hungry fax machines.

Receive Your Faxes, Anytime, Anywhere

Each StarFax™ Digital user is assigned a unique Digitalfax number for incoming faxes. When a fax is sent to that number, the system receives the fax and stores it “in the cloud” at a Star2Star data center. Incoming faxes are stored as Adobe PDF files. A list of received faxes is displayed in the StarFax™ Digital inbox.

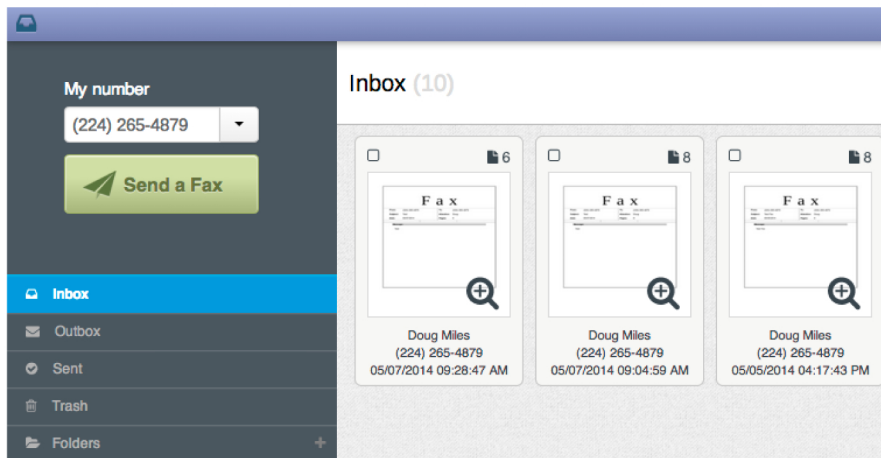

Sending Faxes

Users can send virtually any type of printable file (doc, pdf, jpg, etc.) directly from the StarFax™ Digital software, without printing a hard copy and without using a fax machine. If you can view it on your screen, you can send it with StarFax™ Digital. Laptop users can send and receive faxes anywhere Internet connectivity is available.

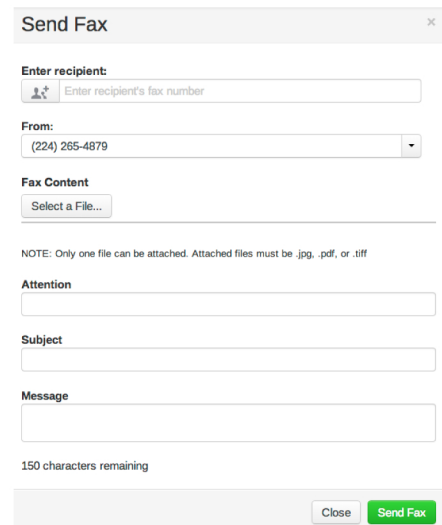

Advanced Features

Advanced features in StarFax™ Digital include the ability to use multiple DIDs and a responsive layout mode.

A Quick Tour Of StarFax™ Digital

The StarFax™ Digital inbox displays a thumbnail image of received faxes. Users can organize faxes into folders using the “Folders” button on the left side of the screen. Clicking on the fax image allows the user to view or download the fax.

The 'Send Fax' form includes the following fields and options:

- Enter recipient:** A text input field with a person icon and the placeholder text 'Enter recipient's fax number'.
- From:** A dropdown menu currently showing '(224) 265-4879'.
- Fax Content:** A button labeled 'Select a File...'.
- NOTE:** Only one file can be attached. Attached files must be .jpg, .pdf, or .tiff.
- Attention:** A text input field.
- Subject:** A text input field.
- Message:** A larger text input field.
- Character Count:** '150 characters remaining'.
- Buttons:** 'Close' and 'Send Fax' (in green).

Sending a fax is easy: Enter the recipient's fax number and select a file to send as a fax. You may also enter cover page information and any message before sending the fax.

StarFax™ Mobile

StarFax™ Mobile is a smartphone application compatible with StarFax™ Digital that allows users to send and receive faxes on their mobile device. StarFax™ Mobile will send faxes to or receive faxes from a StarFax™ Digital account or to a fax machine, all from an easy-to-navigate mobile interface. StarFax™ Mobile enables users to quickly connect and transmit critical documents even if they cannot access their computer or fax machine.

Tech Details

The software behind StarFax™ Digital is a comprehensive Application Framework that provides a platform for a family of Star2Star applications, called Starlets. The Star2Star Application Framework automatically installs updates as they are released, so all users are always running the most recent version of StarFax™ Digital.

StarFax™ Digital is easy to install through settings in the portal. It operates on Windows XP (and later) and Intel based Macs running any version of OS X. StarFax™ Digital uses the same user authentication credentials as your existing Star2Star system, so it doesn't add any administrative overhead for your IT department.
