**Bob Ross**  
Hey, how's everyone doing?

05/06/2014 01:19:51 PM

**Evan Washington**  
I'm great!

05/06/2014 01:20:09 PM

**Tom Athens**  
Fine! Glad we could all meet today.

## Improve Employee Efficiency And Reduce Costs With Cutting-Edge Videoconferencing

### Video Conferencing That Brings People Closer Together

If you have employees in multiple locations, StarVideo™ is the way to connect them face-to-face without incurring travel costs. StarVideo™ is our easy-to-use video conferencing solution that creates more productive meetings at the touch of a button. Up to 12 users can join a real-time StarVideo™ conference with audio. Additional participants can join the conference in audio-only mode. It's robust, interactive and simple to operate. Here's how it works:

- To initiate a conference, an organizer selects the users to invite to the conference using a favorite list or by searching in the company directory.
- Invited users will receive an on-screen notification, letting them know they've been invited to participate.
- When a user accepts the video invitation, the system will provide a list of audio options, including the user's office phone, cell phone, StarPhone™, and any other extensions or dial in that user chooses.
- Once the system has connected the audio, users click the "Start Sharing" button to connect to the video conference.
- A whiteboard feature within the video conference allows participants to view and collectively edit virtually any type of document.
- A text chat feature allows users to communicate with one another during an active conference.

### Invite External Users

You can invite non-Star2Star users to participate in a StarVideo™ conference. A notification email will be sent to them with a link. Clicking the link will open a new browser window that will allow them to connect with the rest of the conference. Functionality may be impacted by user's Internet settings and connection.
